IDENTIFIERS C&TEM, *Comprehensive Elementary Teacher Education Models

ABSTRACT

This bulletin is a supplement of Chapter 7 of Volume 1 of the final report entitled "The Feasibility of the Georgia Educational Model for Teacher Preparation--Elementary" (Johnson and Shearron, 1970) (SP 004 171). The aforementioned chapter summarizes cost data in four categories: materials, equipment, key personnel, and supporting personnel. This bulletin summarizes costs into those categories about which more information may be requested: technical supporting personnel, secretarial and clerical, equipment, materials, computer, travel and communications, professional instruction personnel, professional service personnel, administrative personnel, graduate assistants, consultants. The information is presented in 10 tables, each containing cost estimates for each of the 12 categories for each fiscal year (1970 through 1976). Breakdown into tables is in terms of combined costs for development and operation and separate costs for development and for operation of 1) the total program, 2) the preprofessional phase, 3) the professional phase, and 4) the specialist phase. Costs for facilities and capital are not included. (JS)

1970

Note: This bulletin reports one of a series of investigations designed to develop, evaluate and implement a model teacher education program for the preparation of elementary teachers. This report was prepared pursuant to a contract with the Office of Education, U.S. Department of Health, Education and Welfare. Contractors undertaking such projects under Government sponsorship are encouraged to express freely their professional judgment in the conduct of the project. Points of view or opinions stated do not, therefore, necessarily represent official Office of Education position or policy. This bulletin may not be reproduced without permission.

This bulletin is a supplement to Chapter VII of Volume I of the final report entitled The Feasibility of the Georgia Educational Model for Teacher Preparation--Elementary. (Johnson and Shearron, 1970). The aforementioned chapter summarizes cost data in four categories: materials, equipment, key personnel and supporting personnel. For purposes of a basic report this was regarded as sufficiently detailed since Volume II presents specific cost data for each of the hundreds of activities designed for development and operation. Since the publication of the basic report, the project has received requests for more detailed cost breakdowns. For examples, some have raised the question of what proportion of the estimated cost was for computer services and others have requested information concerning the proportion of the key personnel item set aside for administrative personnel. Thus, this bulletin summarizes costs into those categories about which more information may be requested. They are defined as follows:

Technical supporting personnel refers to all technical supporting personnel needed to develop and operate the model program. This group includes such personnel as artists, laboratory technicians, printers, and draftsmen.

Secretarial and clerical refers to all secretarial and clerical personnel needed for development and operation of the model program.

Equipment refers to major mechanical devices needed to develop and operate the model program in its entirety. It includes such items as teaching machines, listening stations and portable TV equipment.

Materials refers to both expendable items and instructional materials needed for the development and operation of the model program. For example: office supplies; curriculum guides; maps, charts, and globes; science laboratory materials; taped lecture series; duplication supplies; video and audio tapes for recording new instructional series; printed instructional guides; student orientation bulletins; test and evaluation checklists; and staff orientation workshop items.

Computer refers to all costs associated with the development and operation of computer software for the model program. Included in these costs are rental for computer terminals and central processing unit time, and computer cards and tapes. No costs are included for capital outlay for computers.

Travel and communications refers to costs for activities designed to establish the model program at colleges and universities other than the one which is sponsoring the development of the model. Such activities include dissemination through pictorial and written materials and the establishment of cooperative agreements with those colleges and universities seeking to initiate identical or similar programs. Included in these costs are allowances for the recruitment of new faculty with the special skills for the development and operation of the model program

*Professional instruction personnel refers to all academic personnel with the rank of instructor or higher, that are needed to develop and put into operation the model program.

*Professional service personnel refers to professional level personnel, that may not necessarily carry an academic rank in a college or university, that are needed to develop

*Detailed descriptions of job categories may be found in Volume III of the final report (Johnson and Shearron. 1970c.)

and put into operation the model program. This group includes such positions as systems analysis, media production specialists, librarians, etc.

*Administrative personnel refers to all administrative personnel needed for development and sustained operation of the model program. This group includes accountants, business managers, computer programmers and other supportive administrative personnel.

*Graduate assistants refers to all personnel associated with the development and operation of the model program on a part-time basis. Personnel in this category will normally be engaged in part-time academic work pursuing a post-graduate degree in a particular area of study related to the model program.

*Consultants refers to all professional personnel employed for a short term (several hours to several days) during the development and operation of the model program. Personnel in this category will normally provide supportive expertise in a special area of concern such as science education, systems analysis, mathematics, or the teaching of psychology.

In all instances in the tables which follow costs are rounded to the nearest five hundred dollars. Because of rounding, totals may not sum to exact figures. No costs for facilities or capital are included.

Tables 1, 2 and 3 are concerned with costs for development and operation of the program. In general, development costs are those costs required to design and implement the model into sustained operation. These include such activities as planning, designing, preparing

*Detailed descriptions of job categories may be found in Volume III of the final report (Johnson and Shearron. 1970c.)

materials and piloting. Operation costs are those costs which maintain the ongoing program.

Table 1 presents the estimated combined costs for the development and operation of the program model by fiscal years from 1971 through 1976. Table 1 is read as follows: The total estimated costs for development and operation for the six year period is \$18,370,000. Of this total \$7,956,000 will be required for professional instruction personnel, \$923,000 for professional service personnel, \$321,000 for administrative personnel, etc. The various components are further broken-down for each individual fiscal year. For example, during 1971, \$238,000 will be required for professional instruction personnel, during 1972, \$548,000 will be required, etc.

Table 2 presents a summary of just the development costs of the model program, and Table 3 presents a summary of just the operation costs. Tables 2 and 3 are read the same as Table 1.

Tables 4 through 12 present the estimated development and operation costs for each phase of the model program by fiscal year.

Preprofessional phase. Table 4 presents the estimated combined costs for development and operation of the pre-professional phase of the model program. Table 5 presents

the estimated cost for just the development of that phase and Table 6 the estimated cost for just the operation of that phase. Tables 4 through 6 are read the same as Table 1.

Professional phase. Table 7 presents the estimated combined costs for development and operation of the professional phase of the model program. Table 8 presents the estimated costs for just the development of that phase and Table 9 the estimated costs for just the operation of that phase. Tables 7 through 9 are read the same as Table 1.

Specialists phase. Table 10 presents the estimated combined costs for development and operation of the specialists phase of the model program. Table 11 presents the estimated costs for just the development of that phase of the model program and Table 12 presents the estimated costs for just the operation of that phase. Tables 10 through 12 are read the same as Table 1.
